SUMMARY

Computer Science student (UiTM) specializing in Data Science and AI, with hands-on experience in machine learning, data analysis, and AI-powered system development. Proven ability to build practical solutions such as GovTech automation systems and intelligent routing platforms using Python and modern tools.

Strong in rapid prototyping, problem-solving, and applying AI to real-world workflows. Experienced in hackathons and collaborative development using GitHub. Seeking opportunities in Data Science, AI Engineering, or Software Development.

EDUCATION

Bachelor of Computer Science (Distance Learning) — Ongoing

Universiti Teknologi MARA (UiTM), Shah Alam
2023 – Present

- Mode: Part - time
- Focus: Data Science, Machine Learning, Software Development

Diploma in Information Management (IM110)

Universiti Teknologi MARA (UiTM), Machang
Completed: 2018

- Core Areas: Information Systems, Data Management, Records Management, Basic Programming

---

EXPERIENCE

IT Support / Multimedia

Majlis Agama Islam Kelantan (MAIK)
Jan 2021 – Dec 2023 | Pasir Puteh

- Managed IT operations and improved system reliability across departments
- Introduced AI tools to streamline workflows and improve productivity
- Improved database documentation, increasing data retrieval speed by 20%
- Developed and maintained organizational website
- Led digital initiatives to improve staff technology adoption

---

Quality Control Technician

JST Connector (M) Sdn Bhd
Dec 2019 – Jan 2021 | Johor

- Performed inspections and analyzed defect trends to improve product quality
- Maintained accurate quality records and reporting
- Supported process improvements using data insights

Procurement Clerk

CAG Gas Sdn Bhd
Oct 2018 – Nov 2019 | Terengganu

- Managed procurement data, supplier records, and invoices
- Generated reports for purchasing and inventory tracking
- Ensured data accuracy and efficient documentation processes

---

TECHNICAL SKILLS

Programming: Python, Java, C++
Tools: VS Code, Jupyter Notebook, Power BI
Libraries: Pandas, NumPy, Matplotlib, Seaborn, Scikit-learn, Streamlit
Concepts: Machine Learning, Data Analysis, EDA, NLP, Predictive Modeling

---

PROJECTS

SISPAA Intelligent GovTech Router (Hackathon Project)

- Built an AI-powered complaint routing system to automate government workflows
- Designed agent-based AI system to classify and assign complaints automatically
- Integrated LLM (Groq API) for natural language processing
- Designed scalable backend with TiDB
- Reduced dependency on manual routing and improved response efficiency (concept prototype)

MyCoachStudy – AI Learning Platform

- Developed AI-based platform for automated quiz generation and student performance tracking
- Built interactive UI using Streamlit

Data Analysis & Visualization

- Performed EDA to extract trends and insights from datasets
- Built dashboards using Power BI
- Applied data cleaning and preprocessing techniques

Machine Learning Projects

- Built diabetes prediction model (classification)
- Applied linear regression for prediction tasks
- Used K-Means clustering for pattern analysis

ACHIEVEMENTS

- Participated in AI/Tech Hackathon focusing on **Scam Detection / GovTech Solutions**
- Developed real-time prototype under time constraints (idea → working system)
- Collaborated using GitHub for version control and team contribution tracking
- Focused on:
- API integration
- Rapid prototyping
- UI/UX design
- Marketability and real-world application

ADDITIONAL STRENGTHS

- Strong analytical and problem-solving skills
- سريع learner in new tools and technologies
- Experience integrating AI into real-world use cases
- Able to work effectively under pressure (hackathons)

FUTURE GOALS

To become a Data Scientist / AI Engineer specializing in intelligent automation systems, GovTech solutions, and scalable AI applications that solve real-world problems.
